

Target of Evaluation

Startup selling SaaS marketplace solution to Pet Stores to optimize their processes and keep their online presence as well as Pet Owners to find services for their dear ones.

1. Use Cases

Pet Shop Owner

- Register their shop at superPets.com
- Get a subdomain as: theirShop.superPets.com
- Customize “their” shop
- Announce their services and specialties
- Can use the platform’s payment provider
- Can manage their employees and appointments
- Can send coupons, promotions, and reminders to their customers
- Can respond to reviews

Pet Owner

- Can sign up with superpets.com
- Can pick a pet store from their area
- Can register a pet (type, name, breed, age)
- Can manage appointments
- Can leave reviews for a pet shop
- Can pay online

2. Architecture

3. Threat Model

- Exercise 2: identify vulnerabilities. Help yourself with these sources: cwe and security principles
- Exercise 3: Create Credible attack vectors. You can inspire yourself with this resource elevation of privilege
- Exercise 4: Define countermeasures to mitigate the vulnerability or to detect, respond, and recover from the threat scenarios

Id	Title	Vulnerability	Attack scenario	Severity	Countermeasure
1	name me	Briefly describe the vulnerability	Given the vulnerability, WHEN bad thing happens, THEN this is the consequence	Rate me (low, medium, high, critical)	What can we do about it
